Summary

DevOps Engineer with 4+ years automating CI/CD pipelines and release workflows (Jenkins, ArgoCD), provisioning infrastructure-as-code (Terraform, Ansible), and administering containerized cloud platforms (Docker, Kubernetes, Helm, AWS, Azure) in production. Builds cloud-based monitoring and alerting (Elasticsearch) and resolves system and deployment issues through log analysis and root cause identification. Strong Linux, Python, and Bash scripting background; collaborates cross-functionally with engineering teams to improve deployment velocity and platform reliability.

Education

Institute of Engineering and Management, Kolkata, BTech in Electronics and Communication – 2022
West Bengal, India

- GPA: 9.34/10.0

Experience

Digital Engineer, Mott MacDonald – Bangalore, India Sept 2024 – present

- Designed and maintained backend platform services supporting Kubernetes-based DevOps infrastructure on Linux.
- Built a Kubernetes operator in Golang with Helm to automate project provisioning and namespace lifecycle management.
- Designed CI/CD pipelines and release automation with Jenkins and ArgoCD (GitOps), automating ServiceNow-to-Plural-to-Kubernetes delivery and cutting request SLA by 80%.
- Automated infrastructure provisioning using Terraform and Ansible, and administered Azure (Blob Storage, PostgresDB) and AWS environments.
- Built cloud-based monitoring and alerting with Elasticsearch, resolving system and deployment issues through log analysis and root cause identification.
- **Technologies:** Python, Golang, Kubernetes, Helm, Docker, Terraform, Ansible, Jenkins, ArgoCD, Azure, AWS, Elasticsearch, Linux, Bash, Git, Bitbucket, PostgreSQL

Software Development Engineer 1, Fynd – Bangalore, India July 2022 – Sept 2024

- Designed and maintained scalable REST APIs powering the Core Catalog Service for JioMart Partners (B2B).
- Built RBAC-based authentication and authorization systems to enforce secure access control.
- Developed high-throughput product ingestion pipelines using Apache Kafka for low-latency bulk imports.
- Optimized backend queries and caching layers (Redis), improving system performance by 30%.
- Wrote Shell/Bash automation scripts and deployed services on Linux to support CI/CD delivery.
- Collaborated cross-functionally with product and frontend teams to ship production-ready features.
- **Technologies:** Python, NodeJS, Kafka, PostgreSQL, MongoDB, Redis, Nginx, Linux, Bash, Git

Projects

rendercv-action Sept 2026 – present

- Built a GitHub Action wrapping the RenderCV CLI to automatically render CV YAML configs into PDF within CI/CD pipelines.
- Enabled zero-touch resume builds with versioned PDF artifacts on every push, packaged for reuse across repositories.
- **Technologies:** Python, RenderCV, GitHub Actions, CI/CD

Proxmox Homelab May 2023 – present

- Designed and managed Kubernetes clusters with Terraform, Ansible, ArgoCD (GitOps), and Helm for app packaging.
- Implemented containerized workloads with secure networking and automation-first infrastructure practices on Linux.
- **Technologies:** Terraform, Ansible, Kubernetes, Helm, Docker, ArgoCD, Linux, Tailscale

Skills

Cloud & Infrastructure: AWS, Azure, Kubernetes, Helm, Docker, Terraform, Ansible, Linux

Automation & Delivery: Jenkins, ArgoCD, GitOps, CI/CD, Shell/Bash Scripting, Python

Monitoring & Reliability: Elasticsearch, Cloud-based Monitoring and Alerting, Root Cause Analysis

Databases & Messaging: PostgreSQL, MongoDB, Redis, Apache Kafka

Version Control: Git, GitHub, Bitbucket

Methodologies: Agile, Infrastructure as Code, Team Mentoring
